

Long Product Cutter

The long product cutter is an extremely solid and heavy-duty machine on which products such as carrots, parsnips and cucumbers can be removed from the top and tail. The stepping system of the machine ensures the orientation of the product to be cut. It also separates the products so that there is only one piece per processing step.

The machine is equipped with two conveyor belts that can move the products laterally. In this way the head can be cut off first. Then the product is moved to the other side of

the machine to cut the tail there. The length of top and tail can be easily adjusted. In the last step, the product can be cut into equal parts of at least 25mm or a multiple thereof.

THE SPEED OF THE MACHINE IS FULLY ADJUSTABLE. BOTH THE CYCLE TIME AND THE SPEED OF THE CONVEYOR BELTS.

Features of the Long Product Cutter

- Stainless steel motors
- Stainless steel E-cabinet
- Machine dimensions: L x W x H = 1250 x 1100 x 1150
- Speed: 75 products per minute
- Max. product diameter 70 mm
- Max. product length 500 mm
- Maximum power consumption 3kW

Features of all our vegetable processing machines

- Careful treatment and processing improves the shelf life
- High processing capacity
- Maximum yield per processed product
- Equals or betters manual processing
- Attractive end product
- Easy to clean and to service
- Meets European guidelines for food-processing to hygiene and safety

Features of all ZTI smart machines

- Smart innovations that are distinguished by their simplicity
- Simple and safe to operate
- Equipped with the latest technology
- Optimum balance between 'mechanics' and 'electronics'
- Attractive return on investment
