

Fruit & Vegetable Wedger

The Fruit & Vegetable Wedger is suitable for wedging all kinds of fruit and vegetables. For example, celeriac, cabbage and pumpkin and different species of fruit like melon, pineapple and apple. The product is cut into two halves, or four or five wedges. The machine processes maximal thirty pieces per minute. The cutting result gives you sharp and even wedges, ready to be packed or to be further processed.

VERY SAFE AND EASY TO OPERATE

The products are manually placed into the rubber holders on the belt. Once placed in the trays, the chain transport moves it into the machine. Whilst the fruit or vegetable is entering the cutting area, there is no possibility to come in contact with the knives. The cutting area is a closed compartment that can only be opened when the machine is not operating. In the guarded cutting area, the fruit is pressed through the knives below with a pusher. The blades can easily be taken out through an outlet at the side of the machine.

DIFFERENT OPTIONS AVAILABLE

The standard version is equipped with trays for four and for five wedges. This makes it possible to cut smaller wedges from a big celeriac for example. Optionally the four and five segmented blades can also be exchanged by two one segmented blades. The one segmented blade cuts the product into two halves. The wedges are guided out of the machine through a chute at the side of the machine. There they can be collected in a receptacle or moved upwards by a conveyor. Additionally, a counter can be mounted on the machine to count the number of wedges that have been cut.

Features of the Fruit & Vegetable Wedger

- Capacity: max 30 products per minute
- Number of wedges: 4 or 5 pieces *
- Max size product: diameter 200 mm
- Max height product: 200 mm
- Machine built in Stainless Steel 304
- Double coated motors
- Stainless Steel Chain
- Easy access to knife assembly by valve at the side
- Double doors in the guarded section
- Jog function

* Other sizes are possible on request

Features of our fruit and vegetable processing machines

- Careful treatment and processing improve the shelf life
- High processing capacity
- Maximum yield per processed product
- Equals or betters manual processing
- Visually attractive end product
- Meet European guidelines for the food-processing industry in relation to hygiene and safety

Features of all ZTI smart machines

- Smart innovations that are distinguished by their simplicity
- Simple and safe to operate
- Easy to clean and to service
- Equipped with the latest technology
- Optimum balance between 'mechanics' and 'electronics'
- Attractive return on investment

The logical solution for your challenges
