

# Sorting Line

The ZTI Sorting Line sorts different types of vegetable accurately, carefully and quickly. Drumhead cabbage, pointed cabbage, pumpkin and broccoli, for instance. The machine is fully adjustable for each specific need.

## **UNIQUE SORTING SYSTEM**

The sorting lines all have the unique 'sorting mill'. The sorting mills are fitted at a 45-degree angle to the direction of transport through the machine, and the fins move in step with the product. This prevents damage to the product, as the movements are much more fluid. The mills ensure that the product is carefully fed into the right sorting bin.

## **ACCURATE WEIGHING ENSURES A HIGH LEVEL OF ACCURATE SORTING**

The belt on which the product is conveyed measures the weight of the product to a high degree of accuracy. This is possible, as there is no tension on the belt, and each separate consignment can thus be measured accurately. Accurate weighing also makes it possible to sort lots of product.

### Features of the Sorting Line

- Capacity: 60 products per minute
- Stand-alone use, or can be integrated in a processing line
- Max. product weight 5 kg
- Fully adjustable to a great number of sorting weights.
- Machine dimensions: 15,100 x 2500 x 2450 mm (L x W x H)

### Features of all our vegetable-processing machines

- Careful treatment and processing improves the shelf life
- High processing capacity
- Maximum yield per processed product
- Equals or betters manual processing
- Visually attractive end product
- Easy to clean and to service
- Meet European guidelines for the food-processing industry in relation to hygiene and safety

### Features of all ZTI smart machines

- Smart innovations that are distinguished by their simplicity
- Simple and safe to operate
- Equipped with the latest technology
- Optimum balance between 'mechanics' and 'electronics'
- Attractive recovery of investment time
